

# HD Zoom Lens

Available by the end of 2007 a very neat and compact 10X zoom lens will be available. With a very wide (62 degrees) field of view, this 4-40mm range lens weighing just 600g (including a front filter) could be the ideal solution in conjunction with HD remote head cameras. On the SD Toshiba cameras, this lens will also be a useful addition to the lens arsenal as well as future proofing any acquisition.
